GreenSkills4Deaf Unveils Upcoming AI-Powered Mobile App to Help Deaf Youth Launch Green Businesses

Project partners have developed the e-GREEN ENTERPRISE TOOL mobile application. Designed for iOS and Android devices, this new digital tool is engineered to adapt to the unique educational journeys of Deaf and Hard-of-Hearing (DHH) students, helping them transform sustainable ideas into viable businesses.

Building a green enterprise requires structured planning and accessible guidance. The GS4D mobile app addresses this by blending interactive learning formats—including gamified quizzes, interactive games, video lectures, and accessible e-books—allowing DHH users to develop professional skills anytime and anywhere.

Core Application Features:

- Personalizes the learning pathway based on the user's background and educational goals.
- A guided 8-step incubator framework.
- Structured tools to evaluate business viability and environmental impact.
- Native support for both Android and iOS devices.
- Accompanied by an official User Manual and a Video Tutorial to guide students, educators, and trainers through the app's functionalities.

By merging smart technology with tailored accessibility, the application offers DHH youth a step-by-step mentor in their pocket. It allows learners to work through complex business concepts at their own pace in a visual and highly engaging format.
